

The topic of my thesis "Accidents seniors and Prevention"

I chose, because I know from experience that this is a very important and current issues. Injuries in this age group are common and may have for the elderly, as well as for its surroundings and caregivers, severe consequences in the form of sudden loss of significant limitations to its sovereignty and quality of life. Is not without significance or economic aspect. many such injuries could yet could be easily avoided if they had been given sufficient attention to the possibilities of their prevention. To fix the "awareness" of these options would help my work.

In this work I tried to put the available resources together the most comprehensive view of this issue, including some concrete examples of the mentioned seemed appropriate. Statistical data for this work comes from the official outputs of the Czech Statistical Office, Department of Health Information and Statistics of the Czech Republic and the World Health Organization
