

Téma diplomové práce	Derivatives of Rhodanine as Potential Antifungal and Antimycobacterial Drugs
Jméno studenta, studentky	Morid Mahmoudi Majd
Jméno vedoucího diplomové práce	RNDr. Veronika Opletalová, Ph. D.

I. Posudek vedoucího diplomové práce

Morid Mahmoudi Majd elaborated his diploma thesis within the Individual Plan of Study. He performed most of laboratory work in the summer term of the academic year 2005/06 and at the beginning of the winter term in the academic year 2006/07. Hence, the prepared compounds could already be tested for their antifungal properties. Regarding theoretical part of work, Morid mostly used the papers available in the Department and did not performed a profound search in databases. Although the literature was available to him throughout his stay in the department, he was not much interested in reading it and writing the theoretical part of his thesis. He brought the first version of the manuscript as late as in the end of April 2007. This version required a lot of changes and corrections, and Morid would hardly be able to perform them in time and independently. Finally, he managed to complete the thesis only with a lot of assistance from the tutor. Nonetheless, he has learnt many new things and made some progress. The results achieved in his thesis will be included in planned publications about biological effects of benzylidenerhodanines.

I recommend his thesis to discussion and evaluation.

Navrhovaná klasifikace **good**
