

Abstract

The aim of this bachelor thesis was to firstly compare and to stand against each other the objective of the muscle strength measurement of measured and recorded aid of modern computer technology and the subjective examination of the muscle strength performed by the Jandov muscle test. The subjective examination was examined twice independently by two experienced physiotherapists from the MFK Center. Another aim of this bachelor thesis was to put individual subjective examinations against each other and to find out their mutual agreement. Both tests were performed on a group of 20 people.

Keywords

objective examination, subjective examination, muscle strength, MFK metod
