

he topic of his thesis current view on screening

Down Syndrome I chose because of his interest in pediatrics,  
neonatology and Gynecology.

Antenatal screening for trisomy 21 began to be implemented in practice  
beginning of the 70th years. Since then underwent rapid development when the  
invented many new methods for detection of Down syndrome with constantly  
increasing efficiency of the test and moving to earlier detection time  
period of gestation.

The task of my thesis is to summarize all available methods  
prenatal screening for Down syndrome, combinations thereof, and the advantages  
disadvantages efficiency and their preferences by pregnant women.
