

Abstract (in English):

The thesis " Recognition in the investigation of crime" is studies the interaction and communication of criminal proceeding participants and its influence on the quality of those proceedings on recognition. The theoretical part deals with criminal proceedings such as all the trial requirements and factors which affect police investigation. Rights and responsibilities of all participants of trials are defined. Furthermore, communication, its types and categories and -most of all -its impact on successful police interrogation is examined. In conclusion of the theoretical part we describe the aspects which control the investigation and potential offender recognition. In the empirical part the aim was to find out what impact the quality of instructions has on successful offender recognition in simultaneous and combined format. The empirical part was performed in an experiment. The research participants were devided into categories according to chosen standards. Then they were presented with a video recording of a criminal offence followed by recognition. We targeted at discovering whether the instructions and the way they are given influence the results of recognition.
