

The subject of my Diploma work on the theme „Eco – Counselling of industrial, distressed area“ is the analyse of selected Eco – Counselling places located in the Czech Republic and creation of general models of those. The results of this analyze are followed in the next part of this work. Subsequently the teoretical model of Eco - Counselling for the region of Chomutov is proposed. For that purpose, the study of the conditions and characteristics of this locality is utilized.

As for this work, there are following investigative questions: 1) Which models of Eco – Counselling provided in Czech Republic are free of charge? 2) Which model of Eco – Counselling place corresponds with the demand of Chomutov region? (concerning the other characteristics of the region). The essential method for this work is Case Studies, which draw from the methods of anylysis of the Annual Reports.

The benefit of this work is the typology of Eco – Counselling practice in the Czech Republic and subsequently it stresses and explains the relation with the particular region (certain types correspond with certain environment). As well the work proposes dynamic model of Eco - Counselling for the Chomutov region.
