

The topic of his thesis quality of life of patients with hepatitis C , I opted for very interesting perspective on quality of life as such, its evaluation methods , not only in relation to medicine , but also in relation to other social sciences. To estimate the quality of life of patients afflicted with Hepatitis C , I decided , therefore , that the hepatitis C virus is spread across world and affects approximately 180 million people. It is the most common form causes chronic hepatitis presenting with modest and non-specific symptoms that this virus to make a clinical diagnosis difficult. Infection can take decades without the patient realizing her presence. Another aggravating factor is protracted antiviral therapy, which exposes the patient to potential side effects. In addition , 50% of the total effectiveness of the treatment is still under expectations. All of these factors lead me therefore to think how this course disease and its treatment can affect or change the quality of life of affected
