

This thesis concentrates on educational issue. It points out the evaluation of quality and effectivity given by children hospitalized in the children's cardiocentre and by their parents.

Theoretical part characterizes basic aspects of education, personality and role the nurse carrying out the education as well as the personality of the educated person. Further on this thesis concentrates on on a term the quality of the nursing care. An information that is passed to children after a correction and to their parents by nurses carrying out the education were stated in another chapter.

A questionnaire opportunity study was chosen for the empirical part. The questionnaire for parents and children was aimed at quality and effectivity of education. Individual records of the questionnaire were processed, analysed and evaluated in terms of given hypothesis. All hypothesis were confirmed.
