

The aim of my work is to outline the problems that accompany combat tuberculosis on Worldwide , statistical process incidence of TB cases in the Czech Republic and was also a statistically focus on tuberculosis as an occupational disease . I used the data of books , journals internetu.Vzhľadom and availability of data I had to choose a time period from 2000 to 2006 Team work is somewhat out of date , but I think there is a trend to see the development of this diseases in the country. In the chapter on World TB epidemiology I have tried to summarize the main Moments why it is also for our residents , " fortress Europe " with the trend TBC important . In my home town last month many neighbor died of tuberculosis , doc.Solovič talks about some parts of eastern Slovakia as a " endemic " areas incidence of TB. Alone I come from Stary Smokovec and there is (rather was) a lot of institutes in treatment of tuberculosis and respiratory diseases , Motivation can also originated from there .
