

SUMMARY

Prevention of Atherosclerotic Cardiovascular Diseases

Student: Karel Pavlásek

Tutor: Doc. MUDr. Ivan Tilšer, Csc.

**Department of Pharmacology and Toxicology
Pharmaceutical Faculty in Hradec Králové
The Charles University in Prague, Czech Republic**

Theme: The research is particularly focused on Prevention of Atherosclerotic Cardiovascular Disease

Objective: The purpose of the Thesis is to summarize briefly contemporary attitude to the prevention of cardiovascular disease.

Methods: Data processing and research. The information gathered for the purpose of the Thesis are from Czech, foreign and internet sources.

Results: The purpose of the Thesis is to summarize up to date attitude to the cardiovascular disease, especially to the ischemic heart disease. It is focused on prevention and pharmacological therapy. The pharmacological therapy is divided into therapy that leads to decrease of mortality and into therapy which might cause relief, but where any influence on mortality exists. Especially drugs that decrease mortality is the significant part of prevention. With their therapeutic effect we can ensure higher standard of living of the patients.

Conclusion: I have tried to describe the attitude of scientific society to the ischemic heart disease.
