

Abstract

Title: Historical development of snowboarding

Objectives: The aim of the thesis is to describe the historical development of snowboarding.

Methods: Primary data used to gain a deeper understanding of the subject was obtained through qualitative research, specifically through personal interviews with two respondents.

Results: Through guided interviews with selected respondents, it was possible to gain a deeper insight into the period. By comparing the interviews with other experts, it was found that each personality associated with snowboarding has their own perspective on the issue, and their opinions only agree by a small margin.

Keywords: snowboarding, history of snowboarding, development of snowboarding, guided interview, comparison of opinions.
