

ABSTRACT

My thesis deals with the employment opportunities of people with hearing impairment in the Plzen region job market. The theory part defines the term hearing impairment, also the communication forms of people with hearing impairment, as well as their professional employment and related restrictions issue. The practical part of my thesis is focused on the employment of people with hearing impairment in the Plzen region job market.

The research objective focuses on finding out the situation on the labor market for people with hearing impairment, their applicability on the labor market, problems arising from their impairment and possible solutions that would lead to an improvement of the situation. For research survey was chosen mixed research design, the questionnaire survey method was used supplemented by a controlled interview with selected informants. The results of the survey pointed to the problems faced by the hearing impaired disability when looking for a job, as well as possible solutions and recommendations for practice.
