

Abstract:

The bachelor's thesis deals with ectopic pregnancy and blood loss during its surgical treatment.

The work is divided into a theoretical part and a research part. The first part deals with the anatomy of the female genital tract, types of ectopic pregnancies and procedures for their treatment.

The research part was conducted in the form of quantitative research. The data was drawn from the Medea system of the Department of Gynecology and Obstetrics of the 1st Faculty of Medicine of Charles University and the General University Hospital in Prague in the time from 2016 to 2021.

The aim of the research was to find out whether various criteria affect blood loss during the surgical treatment of ectopic pregnancies. Examples of the examined criteria include parity, miscarriage or abortion, age of patients and other criteria, using descriptive statistical analysis of data calculated on the basis of arithmetic mean.

Keywords: ectopic pregnancy, laparoscopy, blood loss, salpingotomy and salpingectomy, transvaginal ultrasonography
