

ABSTRACT

The aim of the Master's thesis is to create a school education program for a selected school with a focus on Health Education. This specifically concerns the creation of a relative subject called Support for Health and Safety. The goal of the selected basic school is to offer students more relative subjects from the 2022/2023 school year. The theoretical section maps preventive programs of the Pilsen Region's Fire Rescue Service and the Police of the Czech Republic, social services and non-profit organizations in the city in which the basic school is located. A part of this section also includes a description of the Health and Safety Education (HSE) educational branch of study, the cross-cutting topic of Personal and Social Education (PSE) and a supplementary educational branch of study called Ethical Education (EE). The practical section contains a questionnaire survey evaluation that was carried out at the basic school. Teachers of both levels and second-level students were included in the questionnaire survey. The questionnaire survey took place with the goal of defining the educational content of the subject. In the second part of the practical section, the characteristics of the relative subject and educational content for 7th to 9th grades are listed. The educational content consists of HSE and EE branches of study and the PSE cross-cutting topic. Specific subject matters are listed primarily according to possibilities of organizations supporting health and safety in the community. Based on the questionnaire survey, several topics were transferred to other grades, and free topics (sexual health, self-defense and healthcare) that students want to study were added into the subject's educational content.

KEYWORDS

Curriculum, Health Education, school education program, Personal and Social Education, Ethical Education, support for health and safety in the community.
