

## **Abstract**

### **Legislation for waste management from the trader's point of view**

The diploma thesis deals with the legal regulation of waste management from the perspective of the trader with regard to Act no. 541/2020 Coll. on waste and Decree 1013/2006 in the case of cross-border shipments of goods. The main objective of this work is to provide a comprehensive analysis of the relevant legislation de lege lata. The first chapter is devoted to waste management and the sources of legislation at the international, European and national levels. The second chapter specifies the basic concepts of waste management relevant to the trader. In the third chapter, the author approaches the subjects of waste management, with which the trader can get in touch in his activities and relationships. The fourth chapter, which together with the fifth chapter forms the focal point of the work, deals with the trader, whereas the author first enshrines the role of the trader in waste management by discussing the motivation to trade in waste, and further defines the waste trading itself. This chapter describes the procedure of the regional office, the result of which is the issuance of a waste trading permit for a certain type and category of waste. The work also creates space for comparison with the institute of waste management mediation. The fifth chapter covers the legal regulation of waste transport and cross-border transport of waste, while the findings revealed that the regulation of notification of transport of hazardous waste does not affect the waste trader, but at the same time does not exclude him from transport. In the sixth chapter, the author examines public authorities, while the author is critical of the actions of the regional authority. The last chapter is dedicated to the illegal actions and the resulting liability.

**Keywords:** waste trader, waste management, environmental law
