

ABSTRACT

The bachelor thesis is devoted to the characteristics of a school-age child, it focuses on children with special educational needs, especially students with specific behavioral and learning disorders. The output of the bachelor's thesis is a structure of city camp, which has a meaningful program, offers activities, games and activities that are suitable, motivating and feasible for these children.

The theoretical part characterizes school age, defines a pupil with special educational needs, focuses on specific learning and behavior disorders within the framework of special pedagogy. Explores free time and education in it. Last but not least, it defines a city camp, focuses on play and motivation and how structure is important for children with behavioral disorders.

The practical part is devoted to the structure of the city camp, which is designed for children with special educational needs, especially for children with specific behavioral and learning disorders. The city camp is scheduled for 4 days. The contents are games that are suitable for children with special educational needs, creative activities and activities to develop the interpersonal development of children. Individual activities and games for children with specific behavioral and learning disorders are written in accordance with professional literature that focuses on children with autism, children with special educational needs and their play and movement skills. The structure is further created in accordance with the idea of the organization Young Life Capernaum, which is dedicated to the use of free time for children with mental disabilities and developmental disorders.
