

Abstract

This bachelor thesis is studying the influence of the war in Ukraine on the delivery and postpartum adaptation of newborn babies of Ukrainian refugees. Analysed factors are ways of giving birth, blood loss, perineal tears, and the Apgar score of newborn babies. This thesis is further divided into theoretical and practical parts.

The theoretical part is dedicated to the anatomy of women`s pelvis, perineal muscles, physiological delivery, operative vaginal birth, caesarean section, newborn adaptation, transcultural nursing, and the war in Ukraine.

The practical part is made as a research survey for which analytical collecting of data was used. The data used in the practical part is taken from NIS MEDEA at the Department of Obstetrics and Gynaecology of the 1st Faculty of Medicine and General University Hospital in Prague, Apolinářská 18, Prague 2. Given data was further processed into tables and charts.

Key words: Refugee, caesarean section, newborn, operative vaginal birth, delivery, perineal tears
