

## **Abstract**

### **Title:**

Comparison of selected parameters in Barbora Krejčíková's matches at the French Open 2021

### **Objectives:**

The main objective of this thesis is comparing the selected parameters in each Barbora Krejčíková's match at the French Open 2021. I compare following parameters: the pace of the game, the count of the selected rallies (after serve from the left side and from the right side, after first serve and second serve), the count of winners in the selected rallies and the place from where the winner was played (baseline or net).

### **Methods:**

The main method in this thesis is notational system analyses. It is an indirect observation of video records. The records contain all seven matches with Barbora Krejčíková at the French Open 2021. The monitored variables are the pace of the game (count as rally time divided by number of shots in that rally), how many of selected rallies was played after: serve from left side, serve from right side, first serve, second serve and count of winners from the selected rallies played from the baseline or from the net. I select the rally in case that there are four or more shots played in the rally.

### **Results:**

In the three set matches Krejčíková is less points ahead than in the two set matches. In the first rounds the percentage of rallies that I can select increase with each match. The play by net is very important part of Krejčíková's play. Mostly in the last three rounds of French Open 2021.
