

Abstract: This work will discuss the current state of AI technologies in connection with disinformation and information warfare, their possible development, limits and concerns. Theoretical part will start with established concepts, works mapping the current state, but also predictions for the future and formulating possible limits. To understand the current state, various relevant case studies will be presented. In the practical part, Focus Group research will be conducted, which will discuss the conclusions and topics arising from the theoretical part and analysis. A discussion of the results and a conclusion will follow.
