

## **Abstract**

This thesis examines Spanish constructions with predicative complement and their equivalents in Czech and Slovak. It is divided into two parts, a theoretical part and a practical part. In the theoretical part, I discuss the characteristics of the predicative complement in Spanish and also in Czech and Slovak. I describe its functions and different types. The practical part consists of corpus analysis using the parallel corpora InterCorp and par-skes-2.0. The aim of this thesis is to find out in what different ways six Spanish constructions with predicative complement can be translated into Czech and Slovak.
