Průběh obhajoby: The student started with a straightforward motivation for the

research, followed by a summary of the key concepts that are certainly needed to better understand the following methods and results as the concepts might not be well known to a more general audience. To test the six presented hypotheses, a complex dataset needed to be constructed. The majority of the presentation time was contributed to the dataset description and methodology, leaving only a limited time for the presentation of the results and interpretation. An important issue of possible reversed causality raised by one of the reports has been discussed and an alternative explanation has been provided. Several other methodological issues have been raised, mostly connected to the country-specific effects that are not sufficiently controlled for. The provided answers showed a good understanding of the topic but they could have been better. Based on the reports and performance during the defense, the committee

agreed on grade B.
