

Abstract

Title of the thesis: International Climate Change Law

Key words: climate change, United Nations Framework Convention on Climate Change, Paris Agreement

The thesis focuses on evaluation of the development of international climate change law since its beginnings with emphasis on the development in recent years. The diploma thesis is divided into an introduction, five parts and a conclusion. The first part focuses on the scientific background of climate change. The second part describes the complexity of this problem and explains the reasons for different approaches of the states to climate change. The third part deals with the subject and sources of climate law. The fourth and fifth parts are devoted to a detailed description of the development of the international climate change regime within the UN with the focus on the development after the adoption of the Paris Agreement in the fifth part.
