

This thesis discusses loci of points. The thesis is constructed as a website which should assist mathematic education in primary schools and especially high schools. The thesis revises loci of points, which is taught in schools. Apart from that, it covers the extensive topic of loci of points and conic sections defined with the help of centers of circles with specified characteristics. The website is enhanced by interactive elements, such as applets and step-by-step exercises, which help understand the topic of discussion.
