

Abstract

The presented diploma thesis presents the procedures and results of the analysis, carried out on an unpublished set of 3158 pieces of chipped industry, which has not yet been part of the rescue archaeological research, carried out on the area of the D11 highway near Ločenice (Hradec Králové district). The examined area had the designation D11-06-6B within the sectional division. Currently, it is the most extensive processed collection from the entire Czech basin, which belongs to the IV. phase of Stroked Pottery culture.
