

The theme of my work " chronic pelvic pain syndrome " (CPPS - Chronic pelvic pain syndrome)

I chose a variety of reasons . First of all, this is a very common and very annoying diseases affecting the quality of life , just as it occurs eg in Crohn disease , myocardial infarction, diabetes mellitus or congestive heart failure .

Symptoms that are associated with CPPS , they encounter during their lives every fifth man . It is one of the most common urological disease patients across races, social groups, and age, then there is the highest incidence between 36 and 50 years , between diseases among men older than 50 years, is the third most common diagnosis . From celebrities who have suffered from the disease is

Former U.S. President John F. Kennedy , the author of Sophie's Choice by William Styron .

The theory of this syndrome is often unclear with a large number of options , as well as therapy is inherently more complex , whose activity is linked to the supposed origin of the disease in of a particular patient , often leads to failure. Taking care of such a patient is interdisciplinary starting urologist , surgeon , continuing through to physiotherapists to psychologists and psychiatrists .
