**Title:** Case study of physiotherapeutic care for a patient after osteosynthesis of the radius head and proximal ulna

**Objective:** The main aim of my bachelor's thesis was to conduct and then document a case study of a patient after osteosynthesis of the radius head and proximal ulna. Then I compared this practical part with the findings from the theoretical section of the thesis.

**Methods:** All procedures applied in this work are based on the knowledge acquired during the bachelor's degree program in physiotherapy at the Faculty of Physical Education and Sport.

**Results:** Physiotherapeutic care resulted in an improvement in the patient's health condition.

**Keywords:** physiotherapy, ulna, radius, fracture, osteosynthesis
