

Title of the Bachelor's Thesis:

Comparison of public and private education in kindergartens

Abstract:

The main goal of the work is to compare education in public and private kindergartens - by comparing school maturity and readiness of preschool children attending both public and private kindergartens. The theoretical framework of the work is based on the characteristics of children of preschool age, the legislative definition of kindergartens and the description of individual educational programs of different types of kindergartens. The practical part of the work evaluates and summarizes results of research conducted through a questionnaire survey among parents of preschoolers in the capital city of Prague and provides answers to set research questions.

Key words:

Kindergarten, public kindergarten, private kindergarten, child, preschool age, school readiness, educational program, parents
