

Abstract

Title: Educational bike trail project in the vicinity of Řevničov

Aim: The aim of this thesis is to design an educational bike trail in the vicinity of Řevničov, which will connect interesting places in the area. The design includes information texts about interesting stops along the trail. A sub-objective was a practical riding of the bike trail by a group of people followed by asking for their feedback.

Methods: Practical verification (riding) of the bike trail by a group of people.
Questionnaire for a group of people who have ridden the proposed bike trail. The questionnaire sought feedback on the proposed project.

Results: The result of the thesis is a design of a lacking educational bike trail in the vicinity of Řevničov. Included in the design are proposed information texts about interesting stops along the trail.

Conclusion: The designed bike trail fills the missing cycling infrastructure in the region. The proposal has the support of local authorities and in the future information panels could be installed on the basis of this thesis, along with trail surface improvements for a safer and more comfortable ride.
