

## **Abstract**

**Title:** **The use of graduates of the Management study program at Faculty of Physical Education and Sport on the labor market**

**Objectives:** This thesis aims is to identify and describe the employment of graduates in Physical Education and Sport Management from 2016 to 2022 in the labor market through electronic questioning.

**Methods:** The conducted research used quantitative method, and information was obtained through electronic questioning via the Click4survey.cz website. The theoretical part of the thesis is based on the selected literature.

**Results:** The base sample for this study consists of graduates from 2016 to 2022. Out of a potential of 236 respondents who graduated during the period, responses were obtained from 115 respondents. The data was analyzed using the chi-square test, with emphasis on identifying variables such as respondents' gender and year of graduation. The results were then analyzed in detail and presented including a graphical format. The research focused on graduates' first steps after graduation, where it was found that more than half of the graduates continued the work they had just started during their studies. It was also found that only a relatively low percentage of graduates had experienced unemployment, both voluntary and especially involuntary. The most comprehensive part consists of questions on the current job of the graduates, the way of finding it, its connection with the sport, financial remuneration and, for example, the place of the current job, dominated by the capital city of Prague. The last part of the questionnaire was devoted to the evaluation of the field of study and the teaching itself, including using the acquired knowledge and skills in practice, where almost half of the respondents stated that they would rather not use these skills. At the same time, 58% of graduates expressed their willingness

to choose this field again if given the opportunity. Based on the results, graduates of the Management of Physical Education and Sport field find employment in the labor market with a good level of financial evaluation. Most of them are satisfied with their current job, but it is important to note that not all of them work in a sports and physical education-related environments.
