
Summary

This thesis on the theme Duodenogastric reflux in patients with chest pain and normal myocardial perfusion scintigraphy is engaged in duodenogastric reflux as a contributing cause of chest pain, a non-cardiac etiology in patients with normal myocardial perfusion scintigraphy and coronarography. The work is divided into six chapters.

The first chapter deals with various reasons of cardiac or non-cardiac chest pain, above all ischemic cardiac disease.

The second chapter limits the aim of the work.

The third chapter describes materials, methods and the set of patients investigated by processing this work.

The fourth chapter is intended to produce by the study, showing the availability of executing myocardial perfusion scintigraphy.

The fifth and sixth chapters evaluate and polemize as a discussion of the knowledge and results obtained in this work.

Keywords: duodenogastric reflux, chest pain, myocardial perfusion
