

Abstract

Title: Survey and questionnaire investigation on the use of technical terminology in non-Olympic gymnastic sports.

Objectives: The aim of the bachelor's thesis was to determine, through a questionnaire survey, whether technical terminology for floor exercises is used in selected non-Olympic gymnastic sports, to what extent, and whether the use of english terms prevails.

Methods: A questionnaire survey method was chosen for data collection. A non-standardized purpose-designed questionnaire was used, which was sent by email to coaches of aerobic gymnastics, teamgym, and parkour. The questionnaire was completed through a web application.

Results: Based on the results of the electronic questionnaire, it was found that most coaches of aerobic gymnastics and teamgym still use gymnastic terminology in training sessions, but not in its entirety. Conversely, parkour coaches do not use this terminology.

Keywords: gymnastics; gymnastic terminology; floor exercise terminology; coach, aerobic gymnastics; teamgym; parkour
