

Abstract

The bachelor thesis is focused on the topic of the Geography Olympiad. Specifically, it examines the part of the Olympiad that consists of a test on working with an atlas. The first part of the thesis is focused on the definition of the tests and their types. This theoretical part includes the definition of the basic characteristics of each test. The organisation of the national round of the Geography Olympiad in Czechia is also mentioned very briefly. In the second part, these properties are investigated on specific tests of the national round of the Geography Olympiad category D for working with an atlas from 2023 and 2024. The calculated properties of the tests are eventually compared with each other and evaluated.

Keywords: Geography Olympiad, work with an atlas, test, testing
