

Abstract

The bachelor thesis explores the decline of Great Moravia by comparing historical written sources with recent archaeological discoveries. The thesis focuses on whether the fall of Great Moravia was primarily caused by Hungarian raids or a combination of factors such as internal conflicts, economic issues, and natural disasters. While new archaeological findings do not provide definitive answers, they offer important insights for further research. The thesis emphasizes the significance of modern technologies, which allow for more accurate revisions of older discoveries and contribute to a deeper understanding of this historical period.

Keywords

Great Moravia, the fall of the empire, early medieval Central Europe, Mojmirids, the decline of civilization, Magyars
