

Abstract

Bachelor's thesis on the topic of the Nursing Process for Patients Using Insulin deals with the knowledge of people with diabetes mellitus about their illness and the difficulties they encounter. **Goals:** The aim of this thesis was to provide a comprehensive overview of information about diabetes mellitus. It aims to identify the most significant errors respondent's knowledge and the difficulties they face. **Methods:** The research was conducted in the form of a questionnaire survey carried out at the 3rd Surgical Clinic of FN Motol. The questionnaire contained a total of 28 questions, of which 4 were open-ended and 24 were multiple-choice. A total of 52 valid questionnaires were included in the study. **Results:** After the statistical analysis of the data, it was found that the respondents' knowledge about their illness is consistent with the initial assumptions. **Conclusion:** After analyzing the results of the questionnaire survey, recommendations for practice were formulated in the conclusion of the thesis.
