

The main goal was inform civil medics about usage acute (immediate) medicine in our military medical support and battle and placekeeping mission. In front line Dressing station Role -1 the medics can affect survival and recovery of soldier that was hurt or sick by their tasks and knowledges. The work was divided into five chapters. The introductory part is focused on history of military medicine, their possibilities use in presents and mainly in missions. The chapter is aids of basic account of similarities and differences in acute medicine and in disaster medicine. In others chapter is named basic structure of military medicine with action statement of garrison infirmaries. The last part of theoretic is fully focused on activity Role 1 in Kosovo. Practical (observational) part of diploma work contains light casuistries. They add theoretical parts. These casuistries passed of during my working in mission (KFOR-Kosovo Force, Kosovo 2007) and on army training two. At the end is published one very interesting casuistry from field-hospital in Afganistan. There is the most important treatment of dog-flea encephalitis and acute pancreatitis
