

The aim of this work was to create a case study of nursing care for a sick patient, the T.R. was taken to the department of gastroenterology 14 December 2009 for suspected acute pancreatitis.

The clinical part deals with anatomy and physiology of the pancreas, also describe acute pancreatitis, its pathogenesis, etiology, clinical forms, symptoms, diagnosis, treatment, prognosis and complications. At the conclusion of this often include basic information about Mrs. TR course of her hospitalization, therapy and diagnostics, which lost in the hospital.

The nursing part deals with the nursing process, the selection process and the nursing model. This part of the first drafted hospitalization day, it is 14/12 2009th I identified the nursing diagnoses that have divided the current short-term and potential. I describe a long-term care plan. I also dealt with the psychology of patients, prognosis of the nursing perspective and educationalists.

In conclusion I present a summary of the literature, list of acronyms and annexes.
