**Fluid resuscitation in treatment of burn shock**

Author: Benedicte Bratland  
Medical student of the 3.th Medical Faculty in Prague

**Review**

Benedicte presents a very well written, succinct, and clear thesis about burn shock fluid resuscitation. The information is important and useful. Benedicte meets the requirements of individual work with medical information. I very appreciate her sedulity and interest of current medical knowledge of intensive care treatment in the burn medicine.
