

This bachelor's degree work focussed on „Staff's activities of Hygiene station Sokolov in the prevention HIV/AIDS in 1987 – 2008" is rating the effectivity of the HIV/AIDS consulting clinic, which is progress since 1987 and the „Regional program for primary precaution of HIV/AIDS and other diseases caused by sex in the region Sokolov and also activities in the region Cheb", which is in progress since 1995. It also reflects our trying to influence not only the acting of some high-risk groups of the population in our region, especially people who are offering sex for money, members of the gay community and people addicted to drugs.

It also tries to influence the young people in this region by teaching them more about spreading HIV/AIDS and other diseases that are being spreaded by sex if we talk about the social composition of the population, however we came off with a succes of maping a part of street prostitution and manage a regular doctor care for some of the prostitutes, including healing of diseases and regular revisions in the dermatovenologic counter. Through targeted doctor care and information about the diseases we achieved, that the prostitutes are informed about the risks of venereal diseases, including HIV/AIDS. In the territory of other high-risk groups in our population we achieved a cooperation with the SOHO and Kotec organizations.

During a 13 year long running „Regional program for primary precaution of HIV/AIDS and other diseases caused by sex in the region of Sokolov and also some activities in the region of Cheb" we achieved through lessons and chats awareness not only of young peple, but also of teachers and the normal population about the spreading of HIV/AIDS.
