

Summary

My graduation theses is focused on sexually transmitted diseases and trend of their frequency in Nymburk region. I am convinced this subject matter is actual and very interesting for their various and wide spectrum.

Goal of my work refers to global serious problem of frequency of sexually transmitted diseases. Increase of incidence of sexually transmitted diseases is caused by growing prostitution, sexual promiscuity, risk sexual behaviour and sexual tourism.

In theoretical part of theses I describe particular disease in terms of their etiological agent, clinical picture, diagnostic and preventive that is very important in fight against described diseases.

Practical part is focused on description of their appearance in region Nymburk and further I am focused on one of the most serious forms primary prevention sexually transmitted and presently very discussed disease HIV/AIDS. I am concerned of interactive performance which gives young people possibility gets up basic knowledge ways of transmission HIV virus, other sexually transmitted diseases and think about self attitudes and behaviour in possibly risk situations.

Graphic documentation of particular diseases and tables with graphs relating to appearance of these diseases is attached.
