

Abstract

Heading: **Injuries during doing winter sports on the ski slopes in the Czech Republic**

Objectives: The main objective of the diploma theses was to determine the incidence of accidents in the Czech mountains during the winter seasons from 2000 - 2001 to 2009 - 2010.

Methods: We focused on gathering data and information regarding the number of injuries on the ski slopes. The main source of information was the database of Mountain Rescue Service of the Czech Republic that provided us with sets of injuries that happened during skiing and snowboarding within the winter seasons 2000 – 2010.

Results: The results of this diploma thesis were statistics of injuries that happened during doing the winter sports for the years 2000 – 2010 and their processing.

Keywords: injury, skiing, snowboarding, cross country skiing
