VLIV PRIMÁRNÍ PREVENCE NA KLIMA VE TŘÍDĚ

Influence of primary prevention on class atmosphere

2011

Doc. PhDr. Jiří Pelikán, CSc.

ABSTRACT

The bachelor thesis is focused on issues of primary prevention and its influence on class atmosphere. The theoretical part deals with details of primary prevention, history of prevention in the Czech Republic and forms of prevention. The principles of effective primary prevention and evaluation of prevention programs are also mentioned. The second chapter is focused on class atmosphere. It defines important terms and factors having influence on class atmosphere. Attention is also paid to climate diagnostics and possibilities of influencing climate, one of which are programs of primary prevention.

The empiric part presents the Project of primary prevention realised by the Christian pedagogical-psychological counseling centre. It summarizes the results of the research on the prevention programs effectivity, which was organized by this pedagogical-psychological counseling centre in 2008. In this part, I also use my own experience with organizing primary prevention programs.

Key words: Effective Primary Prevention, School Climate, Classroom Atmosphere, Primary Prevention, Non-specific Primary Prevention, Social Climate, Specific Primary Prevention
