

Abstract

This study describes results of analysis of findings obtained during the excavation of Knovíz settlement in Praha – Vinoř „V Žabokřiku“. One whole above-ground structure was found and few more can be presumed besides the features. The residential area could be separated from the storage area. Great amount of pottery, loom weights, daub, stone industry and individual animal bones was found mostly in bigger features. This settlement represents Knovíz culture in Late Bronze Age (phases Br D – Ha A1) according to the pottery products' analysis. There is no evidence of other cultures. In the site there were bred domestic animals, we can presume growing and processing corn, also textile production. There is no evidence of bronze items production.
