

**Abstract:**

This diploma thesis focuses on studies of chipped stone industry of the Early Bronze Age in Bohemia and deals with questions connected to its occurrence in settlement and burial sites. The first part of this study presents the results of artefact analysis. The analysed complex of artefacts consists of 108 items and originates in following localities: Kolín - ringroad, Pátek near Poděbrady, Polepy near Kolín, Velké Přílepy a Vliněves. The analysis included the typological and morphological characteristics, used material and the links to their position in settlement objects and other finds. The second part of this diploma thesis summarizes present knowledge of prestigious artefacts such as silicite daggers, axes and arrowheads. Furthermore, it investigates the matter of contacts between Central Bohemia and Moravia on the basis of Moravian stone materials distribution. A catalogue of chipped stone industry from Central Bohemia is also included in this diploma thesis.
