

The topic of his thesis Effects of mental stress on the development of disease sclerosis multiplex, I chose based on their interest in the field of neurology. With regard to the necessity of theme I in collaboration with MD. honey chose this topic because in the past published several papers dealing with this issues, but no single convincing conclusions. gradually with the expansion of scientific knowledge increased as well as the subject for several important discoveries, and so I wanted to try to collect the most recent work on the psychological burden of patients and of the knowledge of the etiology disease, immunological aspects and problems of depressive disturbances in patients with the disease MS. In my observations, I focused on course of disease in patients counseling for RS neurological clinic FNKV receiving antidepressant therapy, and some of them mention in the form of case reports.
