ABSTRACT:

Bachelor thesis is focused on teaching the Czech language of children and pupils with visual impairments. The aim is to clarify the specifics of the education of children with impaired visual perception and introduce methods to facilitate their learning. In the first part of the development of care for the visually impaired, described their progression in the education literature and presented to interested persons may bring the issue closer. The second part focuses more practically, describes learning opportunities for visually impaired pupils today, gives particular examples of textbooks and teaching aids and a questionnaire determines the possibility of using the proposed new equipment. In this work the method was used interview, observation, questionnaires, excerpts.
