

**Abstract:****Bachelor's thesis title:**

The efficiency of free throws in relation to the game results in the highest men's basketball league in Czech Republic.

**Aim of thesis**

The main purpose of this work is to find out how much can successful and unsuccessful free throws affect basketball game by finding differences between the winning and the losing team by using basic statistical calculations.

**Methods:**

In my work I used the method of secondary analysis and basic statistical calculations. Significance of the method of secondary analysis is to analyze data which has been collected by someone else and use them to gain new, previously unevaluated information.

**Results:**

Carried out the research I discovered what free throw percentage the winning and the losing teams have. The winning teams have a 3% higher success rate of shooting free throws.

**Key words:** success rate of shooting, differences, victory
