

Abstract

Title:

Development of game combinations in ice hockey for older pupils

Objectives:

The main aim of this bachelor thesis is to gather informations about the development of game combinations and then create an exercise summary which is specific for offensive game combinations in different areas of the field. It will be a combination of „pass and go“.

Methods:

The first phase of this bachelor thesis will be only theoretical. I will research information from expert literature, which relate to the topic of this bachelor thesis. In the beginning I will focus on sports games, then on ice hockey and then on the game combinations. In another part I will focus on the practical part, in which I will create the exercise and then I will describe these exercise.

Key words:

Sports games, ice hockey, player, puck, exercises, cooperation, pass, training session.
