

Annotation

This bachelor thesis is concerned with the CAN (Child Abuse and Neglect) syndrome, i.e. the syndrome of a tortured, abused and neglected child. Its theoretical part focuses on the definition of the term "CAN syndrome", its development, possible forms of CAN, prevention and diagnostics. The syndromes CSA (Child Sexual Abuse) and CSEC (Commercial Sexual Exploitation of Children) (prostitution, pornography, etc.) are also covered in detail.

The theoretical part is aimed to help raise the reader awareness of this issue, which is an integral part of the today's advanced society. As a result, I decided to draw-up this thesis to pay adequate attention to this issue. The practical part will contain the research of the respondent awareness.
