

## **Abstract**

**Title:** Mountain service in an integrated rescue system

**Objectives:** The main aim of this bachelor thesis is the description of Mountain Service, which performs rescue activities in the mountain environment. Identify Linkage and Collaboration of Mountain Services with Other Components of the Integrated Rescue System.

**Methods:** The bachelor thesis uses the method of analysis and comparison method. In several chapters, the scope and status of the entire Mountain Service, the co-operation of the HS with other components of the IZS is explained, as well as the history and current innovations introduced by the HS for greater safety in the mountains.

**Results:** The Mountain Service also cooperates with the other components of the IRS, according to the nature of the extraordinary event. The frequency of interventions is lower than for other IRS components.

**Keywords:** rescue, service, system, helthcare
